

Evana Sajan Pallivathukkal

Product Designer · AI-native products, design systems, and the internal tools a company runs on

Bengaluru, India | +91 99476 57702 | evana.s.pallivathukkal@gmail.com | [Portfolio](#) | [LinkedIn](#) | [Behance](#)

SUMMARY

Product designer who ships AI-native products end to end, from the interaction model through working code. Designed and built Kai, an AI lesson agent now reaching 10,000+ learners, and authored the AI design-language skill that ~50 published lessons are written inside. Before that, migrated three legacy financial products onto Wells Fargo's public-site design system under policy, legal and enterprise accessibility constraints. Equally comfortable in research and in the repo: HTML, CSS, JavaScript, React, and AI-assisted development. M.Des Interaction Design, IDC IIT Bombay (CEED AIR 4).

EXPERIENCE

Product Designer · Airtribe (AI-native learning)

2026 – Present

- Designed and built **Kai**, an AI lesson agent reaching **10,000+ learners**, which plans a lesson rather than answering a question: a four-question intake, a written lesson with cited sources, and a concept map drawn as you read. Full-stack implementation, frontend and backend, AI-assisted.
- Designed and co-built an **accountability and planning agent (1,500+ users)**, translating ambiguous LLM behaviour into interface states a learner can trust.
- Authored an **AI design-language skill** that the learning-design team writes inside: eight behaviour families rather than a component library, so a component invented tomorrow still comes out on-brand. Carries **~50 pre-reads across 50 modules, 5 subtracks and 3 courses, reaching 1,500+ learners, authored by 10–15 people with no visual designer in the loop**. Of 420 learners surveyed in phase one, **60% called the format more engaging**.
- Moved the company's payments out of a Google Sheet into internal tooling across Sales, LXD and Career Services (**200+ internal users**): three spreadsheets consolidated into one operational table, in three phases, without the sheet going dark. Designed the payment state model (6 types, 11 statuses) and a role-based permission system across 11 namespaced categories.
- One of two product designers owning research, product strategy and design across the full learner lifecycle, on a team of two engineers.

Product Designer, Program Associate · Wells Fargo

2025 – 2026

- Led the UX audit and IA overhaul for Retail Services PLCC and Pay-On, serving **3.8M customers** and driving ~200K monthly visits and **~120K monthly service calls at \$11.37 each**. Cut **9 pages to 4**, a 50% reduction in structural complexity, with clear paths to the highest-frequency tasks.
- Rescued Practice Finance, scheduled for decommission over policy violations and mobile usability: **6+ fragmented pages consolidated into one conversion-focused landing** and one simplified contact flow, signed off as policy-compliant. Designed the decommission messaging alongside it. [Live on wells Fargo.com](#).
- Migrated the annual ESG report from a static PDF to a responsive web experience across **6 breakpoints**, passing enterprise WCAG on a speed-to-market deadline. [Live on wells Fargo.com](#).
- Used AI for competitor synthesis, early wireframing and brand visuals inside a regulated environment — nothing reached a page without surviving legal review. Partnered across Product, Engineering, Legal, Compliance, Content and SEO through full agile cycles, QA and UAT.

Product & Service Designer · Kochi Metro Rail Ltd. & Kerala Water Metro

2023 – 2024

- Ran an end-to-end service-design study of the city's multimodal transport: interviews with riders, station staff and management, personas, journey maps, service blueprints and ecosystem maps connecting front-stage app interactions to back-stage station operations.
- Redesigned the official Kochi1 app around travel intention rather than destination. Tested with **16 participants: SUS 80** overall, 100% task completion on two of three scenarios, cognitive load 53.8 on NASA-TLX. The sustainability layer scored worst and 9 of 16 could not recognise the greener routes — a recognition failure, not a comprehension one.
- Delivered policy recommendations alongside design ones, presented to government stakeholders, and extended the visual language into print and merchandise for Kerala Water Metro.

Architectural Design Intern · Vastu Shilpa Consultants, under Padma Bhushan B.V. Doshi

2022

- Documentation and design visualisation for institutional projects, applying systems-based thinking to spatial composition.

SELECTED SELF-INITIATED WORK

- **Lipi** — a Figma plugin (JavaScript, Figma Plugin API) that pressure-tests screens against Indic localisation: text overflow, line-height breaks and script-specific rendering across Hindi, Malayalam, Tamil and more. Built with AI-assisted coding.
- **A Century of Villains** — an interactive D3 streamgraph tracing 13 villain archetypes across 495 Hindi films and ninety years, with the sampling caveat kept in view under the chart rather than in a footnote.
- **Saveo** — a student savings app built on behavioural design principles; full cycle from contextual inquiry and IA through hi-fi UI, prototyping and usability testing.

EDUCATION

M.Des, Interaction Design · IDC, IIT Bombay · 2023–2025 — 8.81 CGPA, **CEED All India Rank 4**, TA for Data Visualisation.

B.Arch · SPA New Delhi · 2018–2023 — 8.08 CGPA, Distinction, Charles Correa Gold Medal Finalist.

SKILLS & TOOLS

AI & Product: LLM and agentic UX, conversational and AI interaction patterns, end-to-end product design, design systems, information architecture, interaction design, journey mapping, service blueprinting, usability testing, WCAG accessibility.

Technical: HTML, CSS, JavaScript, React (working proficiency), Figma Plugin API, AI-assisted development (Claude, Cursor, v0), prompt-based prototyping.

Tools: Figma (expert), FigJam, Miro, Adobe Creative Cloud, ProtoPie, Framer, Confluence, Jira.
