SUMMARY

Product designer who ships AI-native products end to end, from the interaction model through working code. Built Kai, an AI lesson agent reaching 10,000+ learners, and authored the AI design-language skill that ~50 published lessons are written inside. Before that, migrated three legacy financial products onto Wells Fargo's public-site design system under policy, legal and enterprise accessibility (WCAG) constraints. M.Des in Interaction Design, IDC School of Design, IIT Bombay (CEED All India Rank 4).

EXPERIENCE

Product Designer | Airtribe | 2026 – Present

- Designed and built **Kai**, an AI lesson agent reaching **10,000+ learners**, which plans a lesson rather than answering a question: four-question intake, a written lesson with cited sources, a concept map drawn as you read. Full-stack, AI-assisted.
- Designed and co-built an **accountability and planning agent (1,500+ users)**, turning ambiguous LLM behaviour into interface states a learner can trust.
- Authored the **AI design-language skill** the learning-design team writes inside: eight behaviour families rather than a component library, so a component invented tomorrow still comes out on-brand. Carries **~50 pre-reads across 50 modules and 3 courses, 1,500+ learners, authored by 10–15 people with no visual designer in the loop**. Of 420 surveyed, **60% called the format more engaging**.
- Moved the company's payments out of a Google Sheet into internal tooling for Sales, LXD and Career Services (**200+ internal users**): three spreadsheets into one operational table, in three phases, without the sheet going dark. Designed the payment state model (6 types, 11 statuses) and role-based permissions across 11 namespaced categories.
- One of two product designers at Airtribe, an AI-native learning company, owning user research, product strategy and design across the full learner lifecycle, alongside two engineers.

Product Designer, Program Associate | Wells Fargo | 2025 – 2026

- Led the UX audit and information architecture overhaul for Retail Services PLCC and Pay-On, serving **3.8M customers** and driving ~200K monthly visits and **~120K monthly service calls at \$11.37 each**. Cut **9 pages to 4**, a 50% reduction in structural complexity.
- Rescued Practice Finance, scheduled for decommission over policy violations and mobile usability: **6+ fragmented pages consolidated into one conversion-focused landing page** and one simplified contact flow, signed off as policy-compliant, plus the decommission messaging. [Live on wells Fargo.com](https://live.wellsfargo.com).
- Migrated the annual ESG report from a static PDF to a responsive web experience across **6 breakpoints**, passing enterprise WCAG accessibility standards on a speed-to-market deadline. [Live on wells Fargo.com](https://live.wellsfargo.com).
- Used AI for competitor synthesis, early wireframing and brand visuals inside a regulated environment — nothing reached a page without surviving legal review. Worked cross-functionally with Product, Engineering, Legal, Compliance and SEO through full Agile cycles, QA and UAT.

Product and Service Designer | Kochi Metro Rail Ltd. and Kerala Water Metro | 2023 – 2024

- Ran an end-to-end service design study of Kochi's multimodal transport: user interviews with riders, station staff and management, personas, journey maps, service blueprints and ecosystem maps. Delivered policy recommendations alongside design ones to government stakeholders.
- Redesigned the official Kochi1 app around travel intention rather than destination. Ran usability tests with **16 participants**, scoring **SUS 80**, 100% task completion on two of three scenarios, cognitive load 53.8 on NASA-TLX. The sustainability layer scored worst and 9 of 16 could not recognise the greener routes — a recognition failure, not a comprehension one.

Architectural Design Intern | Vastu Shilpa Consultants | 2022

- Documentation and design visualisation for institutional projects, under Padma Bhushan B.V. Doshi.

PROJECTS

- Lipi** — a Figma plugin (JavaScript, Figma Plugin API) that pressure-tests screens against Indic localisation: text overflow, line-height breaks and script-specific rendering across Hindi, Malayalam, Tamil and more.
- Saveo** — a student savings app built on behavioural design principles: contextual inquiry and information architecture through high-fidelity UI, prototyping and usability testing.

EDUCATION

Master of Design (M.Des), Interaction Design | IDC School of Design, IIT Bombay | 2023 – 2025

CGPA 8.81/10 | **CEED All India Rank 4** | Teaching Assistant, Data Visualisation

Bachelor of Architecture (B.Arch) | School of Planning and Architecture (SPA), New Delhi | 2018 – 2023

CGPA 8.08/10 | Distinction | Charles Correa Gold Medal Finalist

SKILLS

AI & Product Design: LLM and agentic UX, conversational and AI interaction patterns, end-to-end product design, UX/UI design, user research, user interviews, usability testing, information architecture, interaction design, wireframing, prototyping, design systems, responsive design, service design, personas, journey mapping, service blueprinting, UX audits, WCAG accessibility.

Technical: HTML, CSS, JavaScript, React (working proficiency), Figma Plugin API, AI-assisted development (Claude, Cursor, v0), prompt-based prototyping.

Tools: Figma (expert), FigJam, Miro, Adobe Creative Cloud, ProtoPie, Framer, Confluence, Jira.
